The gov. survey on the west side of this section was lost. I proceeded on the theory that the N & S lines were parallel and also the E & W section lines and that the half acre corner originally divided the section lines equally. This plan seemed to work out in a very satisfactory manner. It will be observed that the line from the original corner at NW 1/4 29 to the original at SW 1/4 19 has the same var. as the south line as located by two gov. corners. This plan works very well on the gov. surveys but not on many others and cannot, of course, be always relied on in private surveys. The NE corner was located from Clogston's survey in 21
